

Our smallest and most compact fully auto machine specifically developed for our PolyGROM™ range of eyelets.

This machine dramatically speeds up eyeletting compared to manual methods, so much so that for example you could easily eyelet an entire banner while an operator using manual tools would still be fitting the first eyelet.

Designed for high volume constant use, this fully automatic eyeletting machine feeds both the eyelet and backing washer to the setting dies via hopper fed raceways. Then in a single action punches out a hole in the material while simultaneously setting the eyelet without the operator having to handle individual components.

Supplied as standard on a wheeled mobile unit that can be easily moved around the work place. However it can be fixed to a suitable bench if required.

For our PolyGROM™ range of eyelets.

When fitted PolyGROMS™ make the whole banner easier to recycle as a complete unit rather than having to remove each individual metal eyelet from the banner and recycle separately.

- **Small compact design**
- **Quiet operation.**
- **Designed for the banner industry**
- **Large capacity component bowls.**
- **A video demonstration of this machine can be viewed on our website.**
