

A great value auto feed eyeleting machine that also reduces component costs.

The PMJ258 STAR is an electro pneumatic eyelet machine that automatically delivers the eyelet to the setting tools where it simultaneously cuts a hole in your material and sets the eyelet in a single operation.

Uniquely engineered component and setting tool design eliminates the need for a backing washer, while still maintaining a strong grip.

Designed for use with our strong BSR solid brass eyelets

Accurately positions eyelets in your material using the combination of a laser pointer and distance stops.

- **Designed for the banner industry**
- **Pneumatic operation**
- **Electronic control system**
- **Small compact design**
- **Quiet operation**
- **Large capacity component bowls**
- **Watch the video on our website.**
